

# DIFFERENCES BETWEEN ML, DL AND AI

## ARTIFICIAL INTELLIGENCE

Science that empowers computers to mimic human intelligence such as decision making, text processing, and visual perception. Ai is a broader field (i.e.: the big umbrella) that contains several subfield such as machine learning, robotics, and computer vision.

## **MACHINE LEARNING:**

·Machine Learning is a subfield of Artificial Intelligence that enables machines to improve at a given task with experience. It is important to note that all machine learning techniques are classified as Artificial Intelligence ones. However, not all Artificial Intelligence could count as Machine Learning since some basic Rule-based engines could be classified as AI but they do not learn from experience therefore they do not belong to the machine learning category.

## ARTIFICIAL INTELLIGENCE

Science that enables computers to mimic human intelligence.

Subfields: Machine Learning, robotics, and computer vision

## MACHINE LEARNING

Subset of AI that enable machines to improve at tasks with experience

### SUPERVISED LEARNING

Training algorithms using labeled input/output data.

#### CLASSIFICATION

#### CLUSTERING

### UNSUPERVISED LEARNING

Training algorithms with no labeled data. It attempts at discovering hidden patterns on its own.

#### CLUSTERING

### REINFORCEMENT LEARNING

Algorithms take actions to maximize cumulative reward.

## DEEP LEARNING:

Deep Learning is a specialized field of Machine Learning that relies on training of Deep Artificial Neural Networks (ANNs) using a large dataset such as images or texts. ANNs are information processing models inspired by the human brain. The human brain consists of billions of neurons that communicate to each other using electrical and chemical signals and enable humans to see, feel, and make decision. ANNs works by mathematically mimicking the human brain and connecting multiple “artificial” neurons in a multilayered fashion. The more hidden layers added to the network, the deeper the network gets.

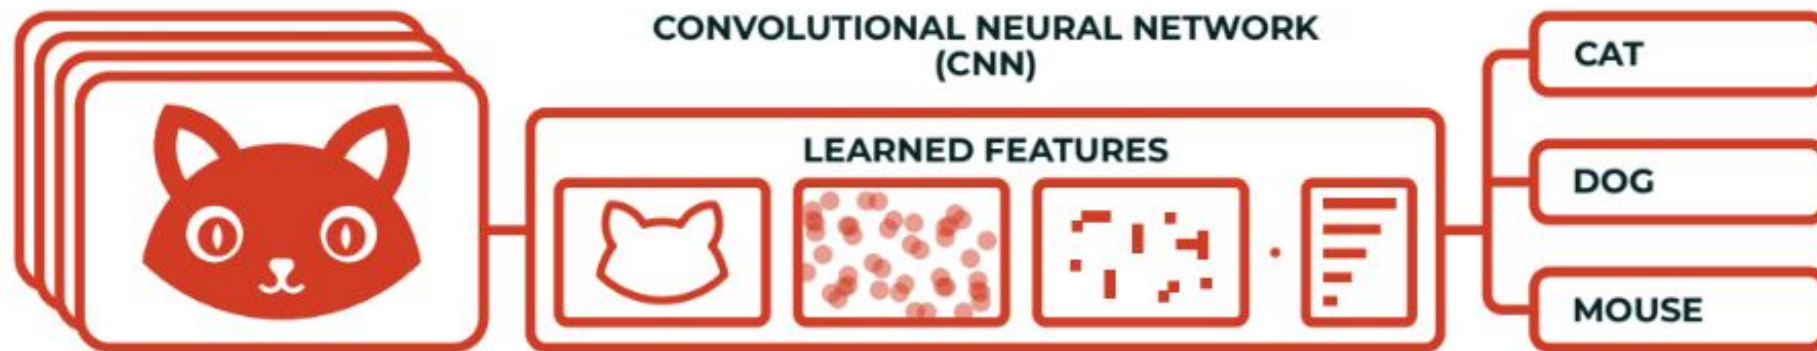

What differentiates deep learning from machine learning techniques is in their ability to extract features automatically as illustrated in the following example:

- Machine learning Process: (1) selecting the model to train, (2) manually performing feature extraction.
- Deep Learning Process: (1) Select the architecture of the network, (2) features are automatically extracted by feeding in the training data (such as images) along with the target class (label).

## MACHINE LEARNING

## DEEP LEARNING

## Data Science

- Need of entire analytics universe
- Branch that deals with data
- Different operations related to data i.e.
  - Data Gathering
  - Data Cleaning
  - Data Subsetting
  - Data Manipulation
  - Data Insights [Data Mining]

## Machine Learning

- Combination of Machine and Data Science
- Machines utilize Data Science techniques to learn about the data hence called as Machine Learning
- Model Building, Model Evaluation and Validation
- 3 Types:
  - Unsupervised Learning
  - Reinforcement Learning
  - Supervised Learning
- Most popular tools are Python, R and SAS

## Deep Learning

- Specific branch of Machine Learning that deals with different flavours of Neural Network
- Examples
  - Simple Neural Network
  - Convolutional Neural Network
  - Recurrent Neural Network
  - Long Short Term Memory
- Mainly utilized in..
  - Object detection in Image and Video
  - Speech Recognition
  - Natural Language Processing and Understandings

## Artificial Intelligence

- Big Umbrella
- Empowering machines to take decisions on their own
- As the name suggest imparting humans' natural intelligence in machines
- Thus machines have ability to understand and react according to the situation

# Evolution

1962– John W  
Tukey (Future of  
Data Analysis)

1966-1977 -SAS  
University North  
Carolina

1991- Python  
Guido Van  
Rossum

1991-1993 R  
Ross Ihaka, Robert  
Gentlemen

Early 2000 SAS  
–Social Media  
Analytics

2001 –William S  
Cleveland (Data Science: An  
action plan for Expanding the  
Technical Areas in the field of  
Statistics)

2007 – Scikits learn

2010 – Mike  
Loukides (What is  
data science)

## Computer Science

- Leibniz – Binary Logic.

- Turing machines
- Information Theory
- Weiner & Cybernetics
- Von Neumann Architecture.

- Babbage, Lovelace
- Boolean Algebra
- Punch cards.

- Sort & Search Algorithms – Dijkstra, Kruskal, Shell Sort, ...
- Heuristics – Simulated Annealing, ...

- Text/ string search
- 1974 Peter Naur "Concise Survey of Computer Methods", **Data Science, Datalogy**
- Knuth – Art of Computer Programming.

- Database Marketing
- Data Mining, Knowledge Discovery
- "Data science, classification, and related methods."

## Data Technology

- Catrography
- Astronomical Charts.

- William Playfair
- Charles Minard
- Florence Nightingale.

- First IBM Computers
- DBMS.

- Graph Algorithms
- Multigrid methods
- Tree based methods.

- 1989 First KDD Workshop
- Gregory Piatetsky-Shapiro.

- Removable Disk drives
- Relational DBMS.

- Desktop, floppy  
SQL, OOP  
High level languages.

- William Cleveland: Data Science
- Leo Breimann: Statistical Modeling: 2 Cultures

## Visualization

- Calculus
- Logarithms
- Newton-Raphson

- Optimization Methods
- Fourier and other transforms
- Matrix & Generalizations
- Non-euclidean geometries.

- Applications to Military, manufacturing, Communications.

- Networks
- Assignment Problems
- Automation
- Scheduling

- John Tukey
- Jacques Bertin.

- Edward Tufte,
  - Grammar of Graphics
  - Word Cloud, Tag Cloud.

## Mathematics/ OR

- Probability
- Correlation
- Bayes Theorem.

- Regression, Least Squares
- Time Series

- Theoretical Foundations of Modern State
- Hypothesis, DOE
- Mathematical Statistics.

- Bayesian Methods
- Time Series Methods (Box Cox, Survival, etc.)
- Stochastic Methods.

- 1962 John W. Tukey, Future of Data Analysis

- 1976 – SAS Institute
- 1977 The International Association for Statistical Computing (IASC).

- Decision Science
- Pattern recognition
- Machine learning.

- Simulation, Markov
- Computational Statistics.

**Business Intelligence**

vs

**Data Science**

# Business Intelligence vs Data Science

Criterion	Business Intelligence	Data Science
Data Source	✔ Structured data e.g. Data Warehouse	✔ Unstructured data e.g. web logs
Method	✔ Analytical	✔ Scientific
Skills	✔ Statistics, Visualization	✔ Statistics, Visualization, Machine Learning
Focus	✔ Past and Present Data	✔ Present Data and Future Predictions

# Prerequisites for Data Science

---

The following are the 3 essential traits of a Data Scientist:

CURIOSITY

Only when you ask questions, you will have a better understanding of the business problem

# Prerequisites for Data Science

---

The following are the 3 essential traits of a Data Scientist:

CURIOSITY

COMMON SENSE

To identify new ways to solve a business problem and to detect priority problems

# Prerequisites for Data Science

---

The following are the 3 essential traits of a Data Scientist:

CURIOSITY

COMMON SENSE

COMMUNICATION SKILLS

A Data Scientist needs to communicate their findings to business teams to act

# Prerequisites for Data Science

---

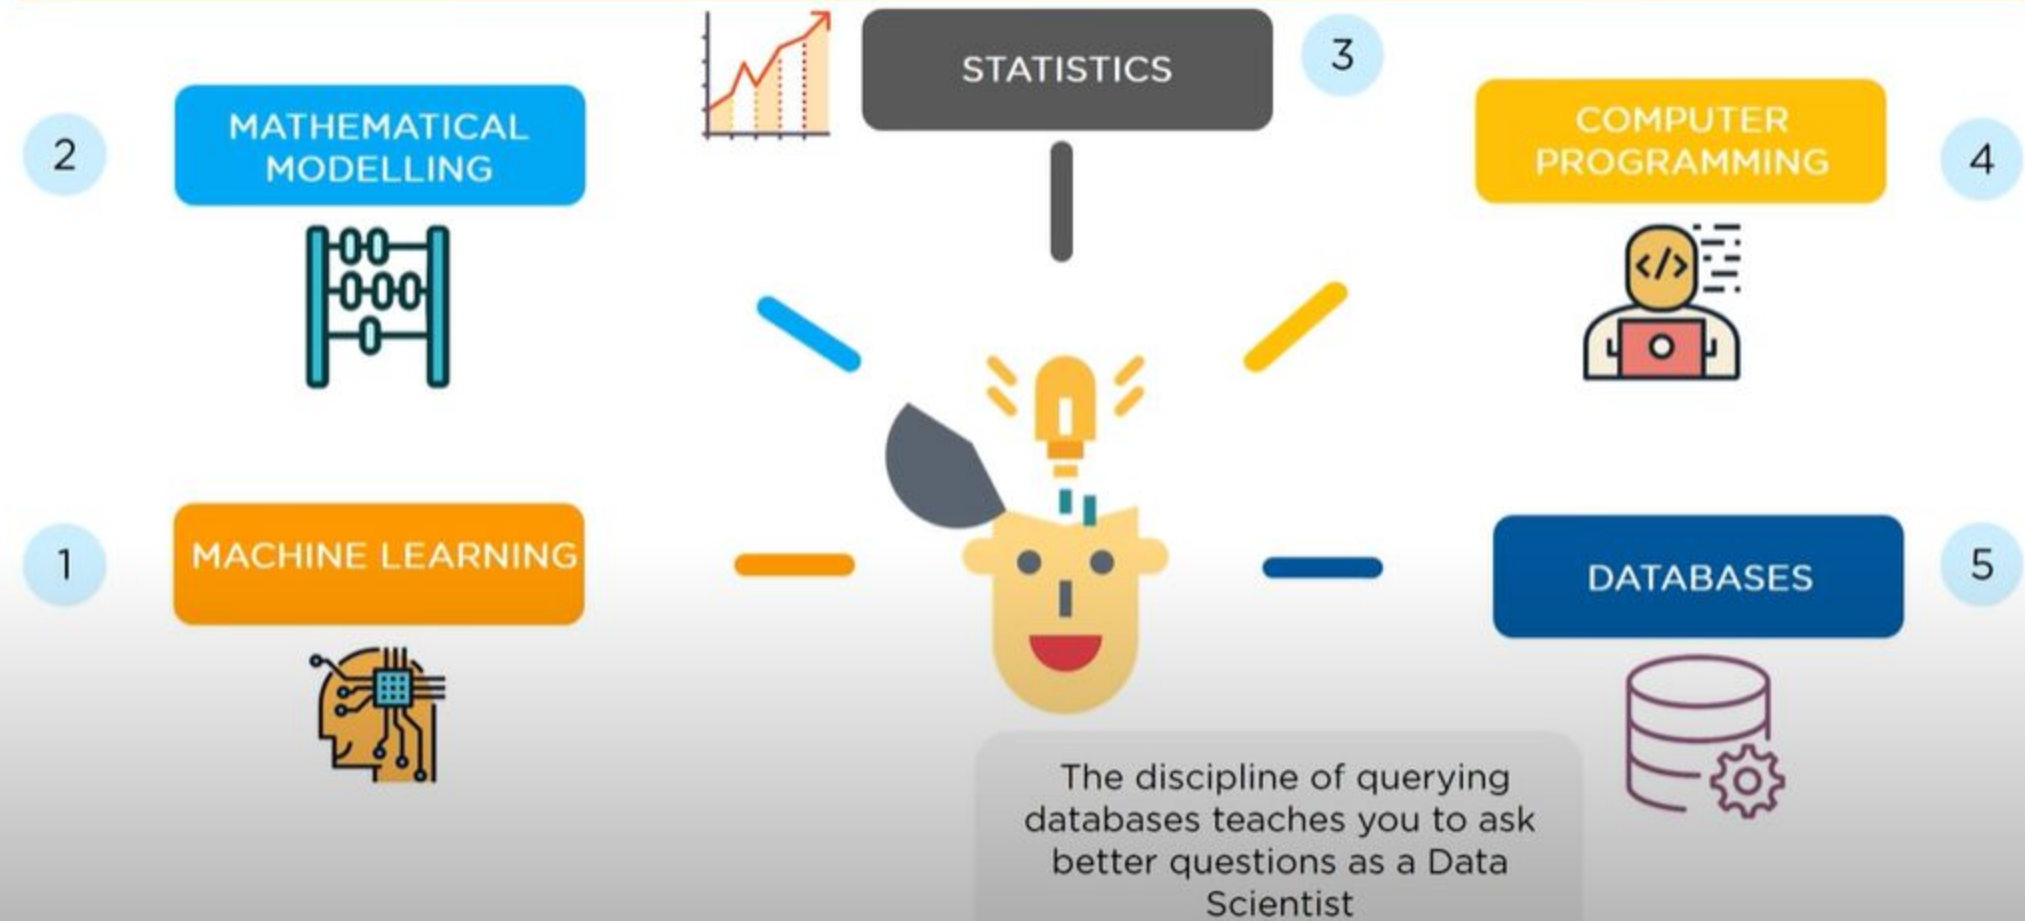

1

MACHINE LEARNING

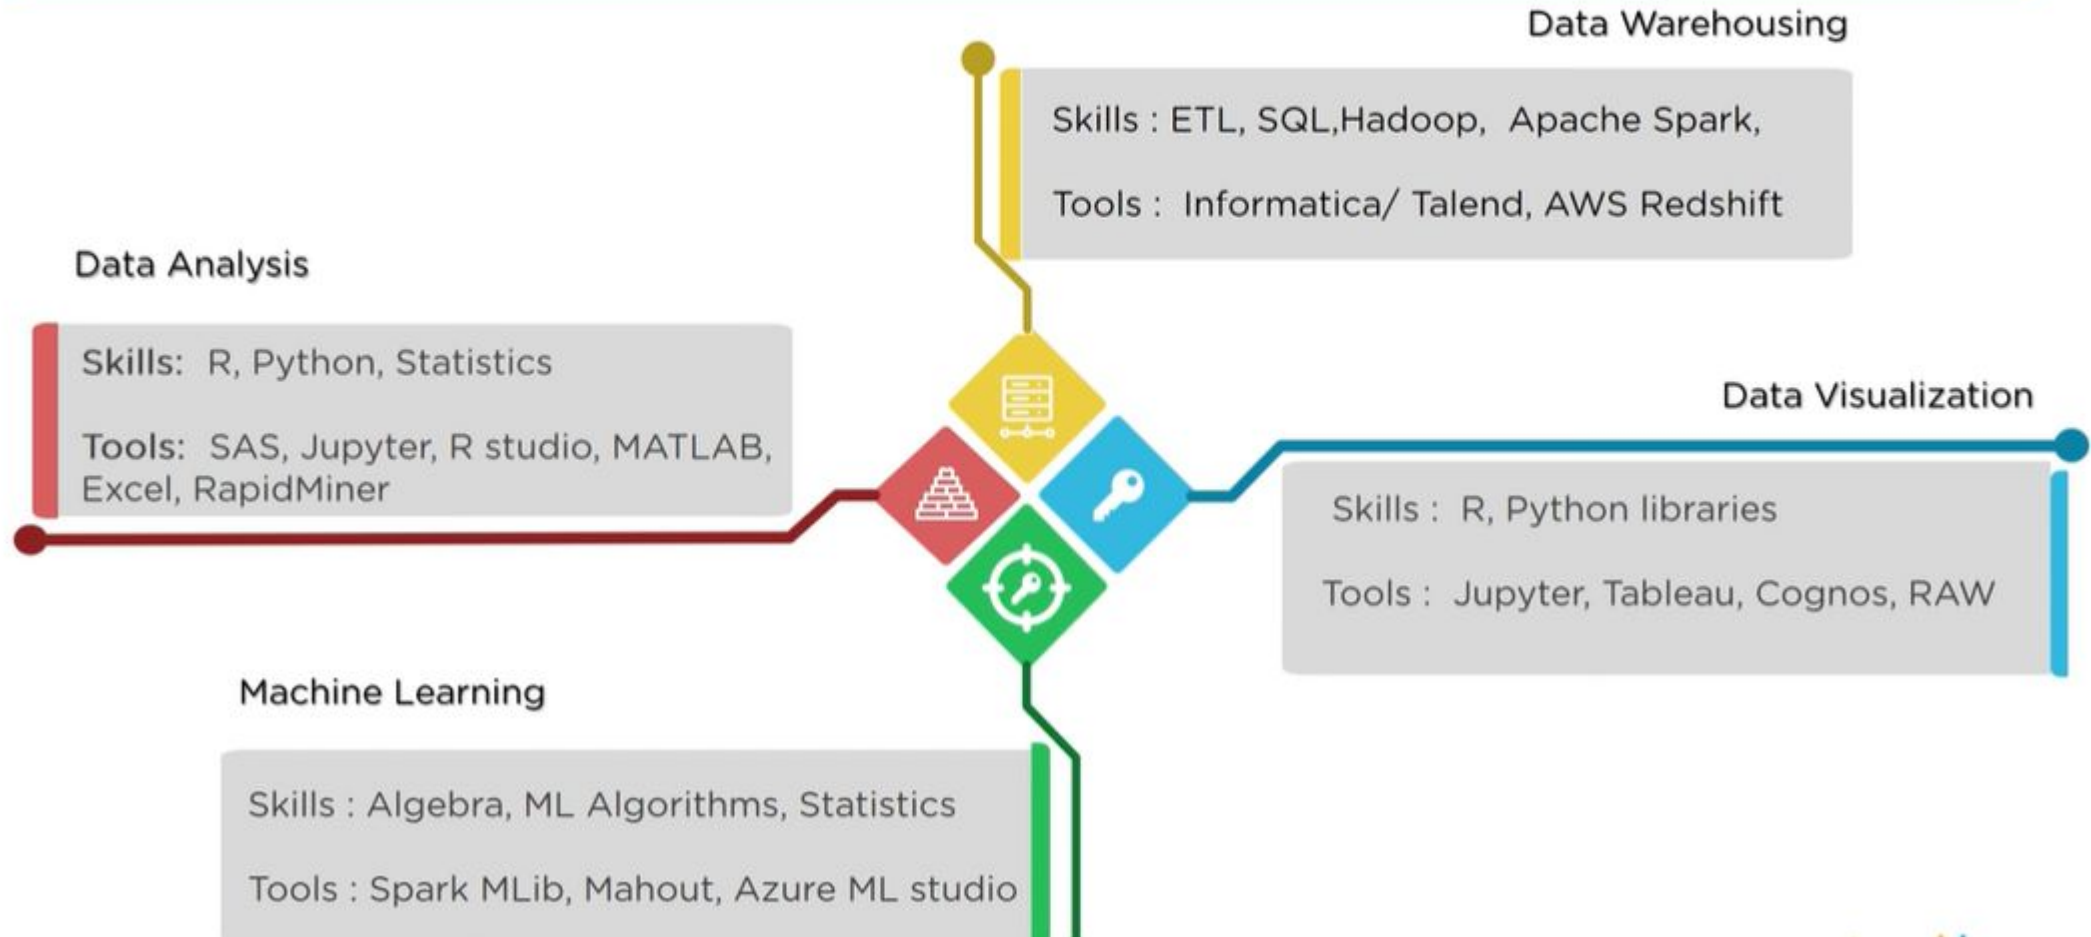

Machine learning is the backbone of Data Science. It is one of the many ways that Data Science uses to find solution to a problem

# Prerequisites for Data Science

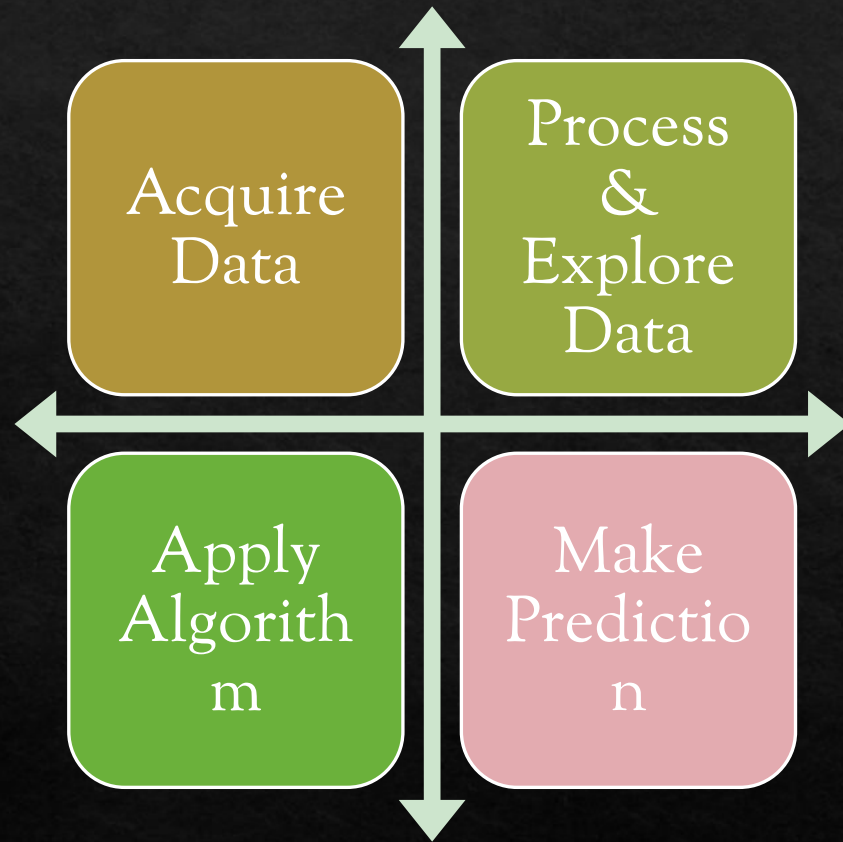

# Tools/Skills used in Data Science

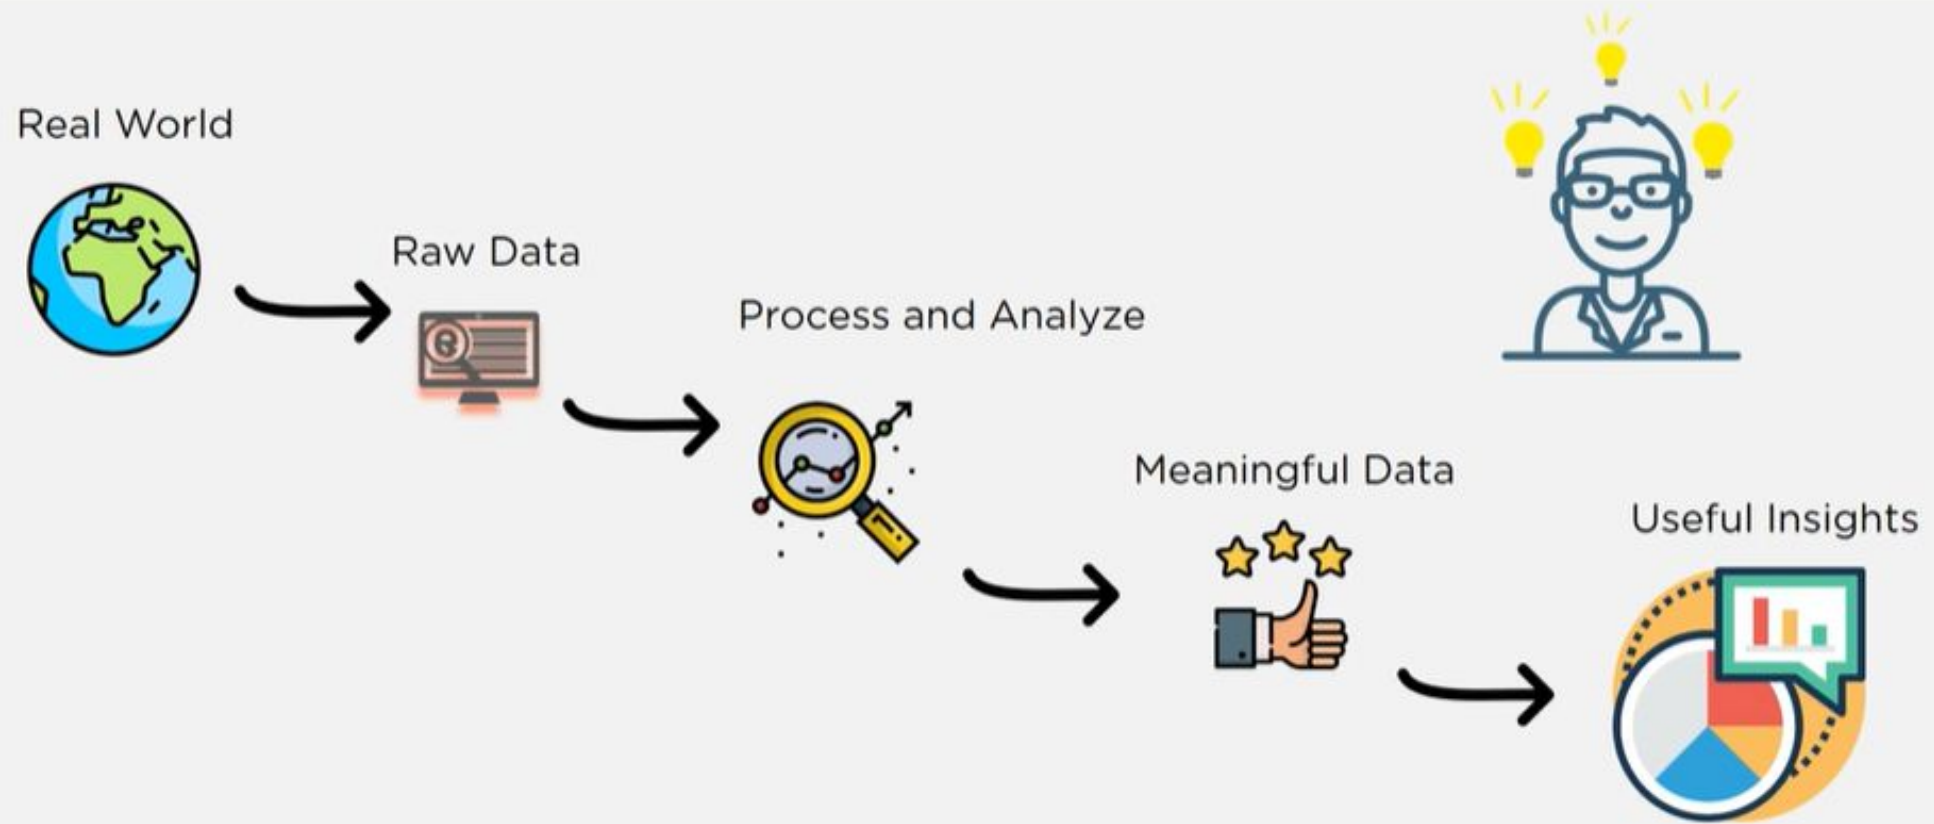

# Data Science Process

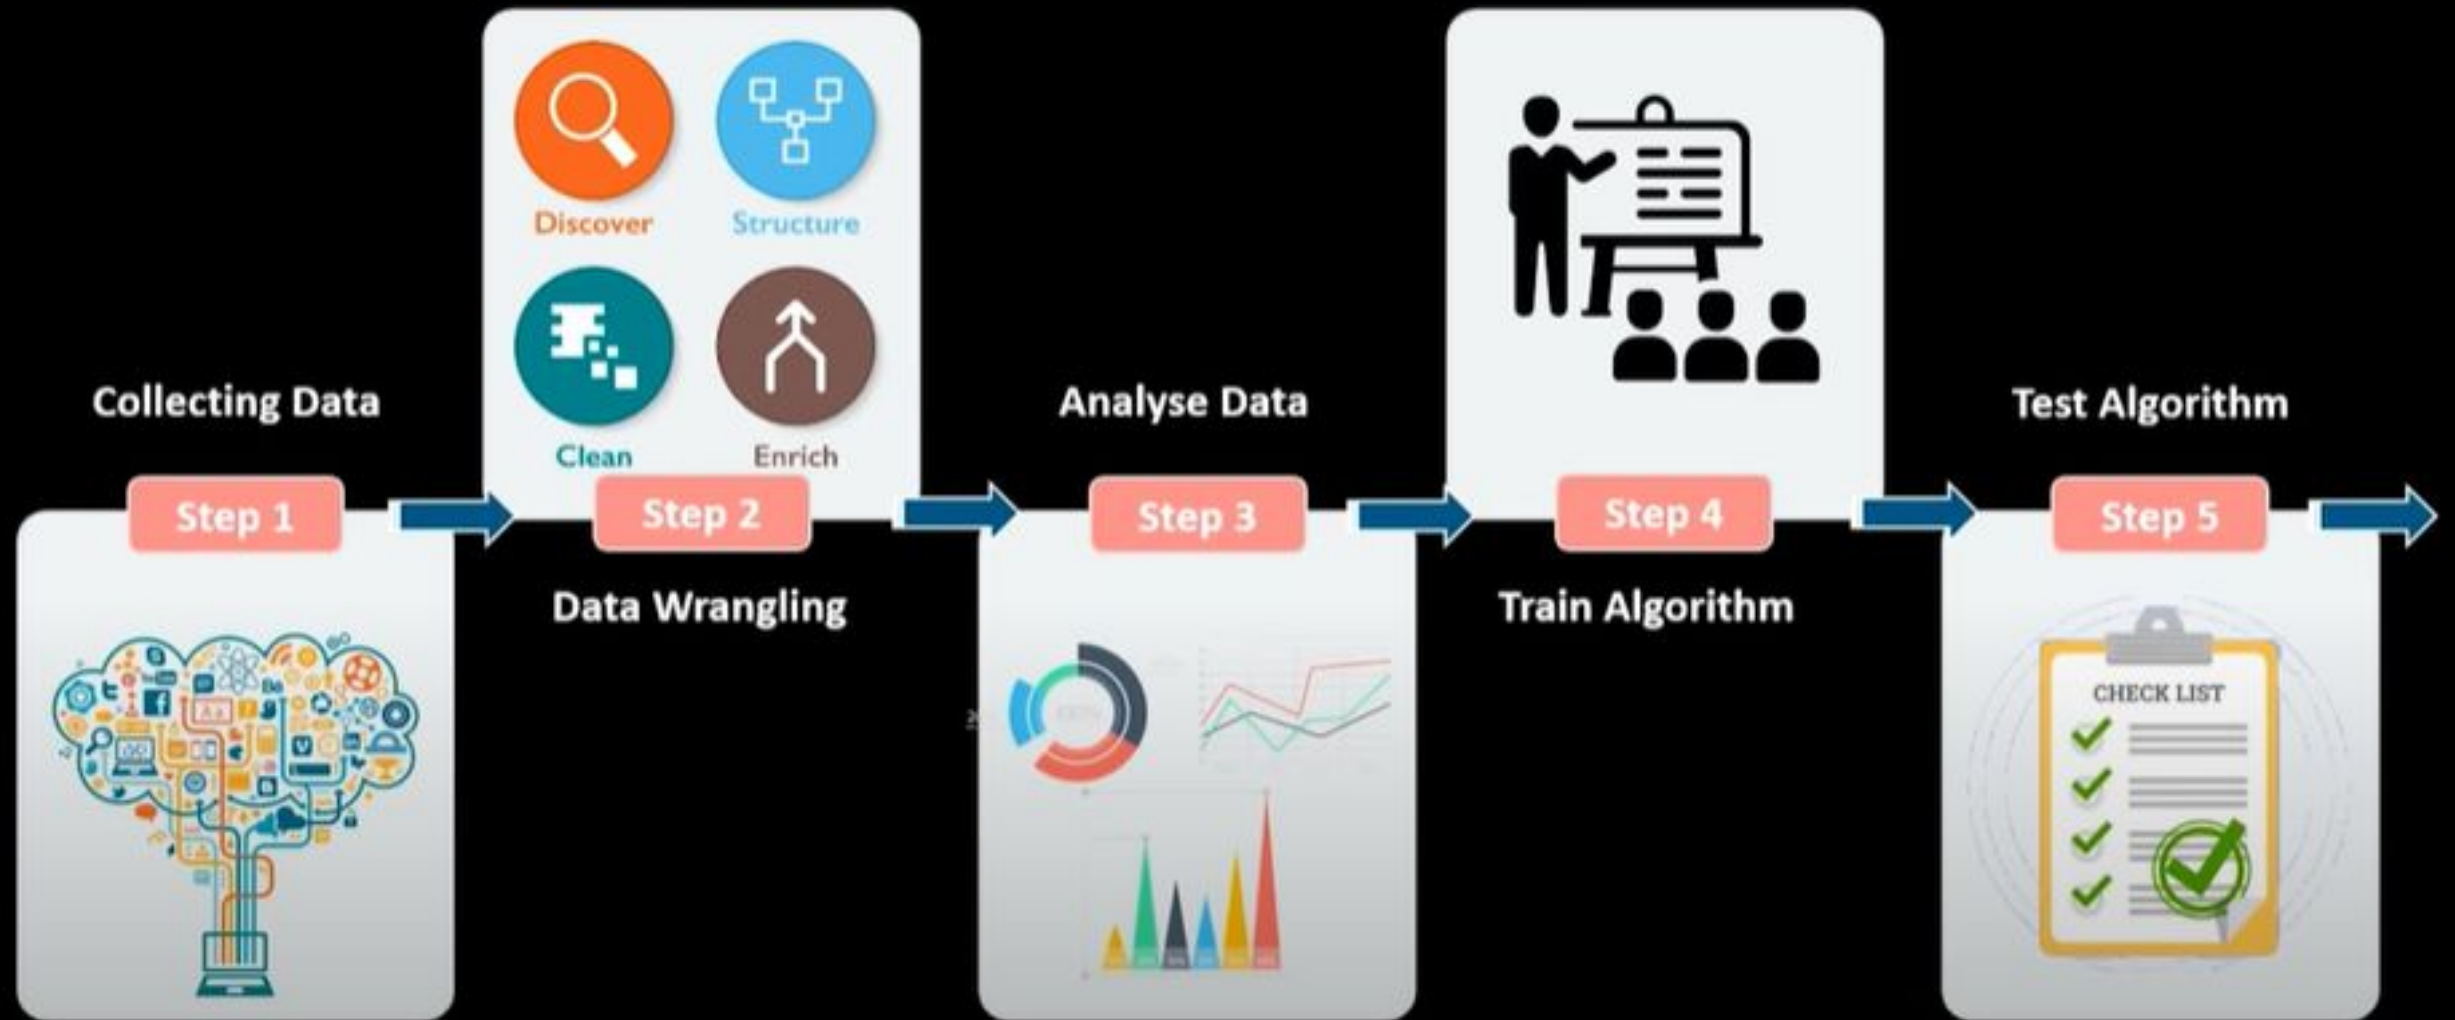

# What does a Data Scientist do?

# MACHINE LEARNING STEPS

## Types of Learning

Supervised Learning

Reinforcement Learning

Unsupervised Learning

## ◆ Regression

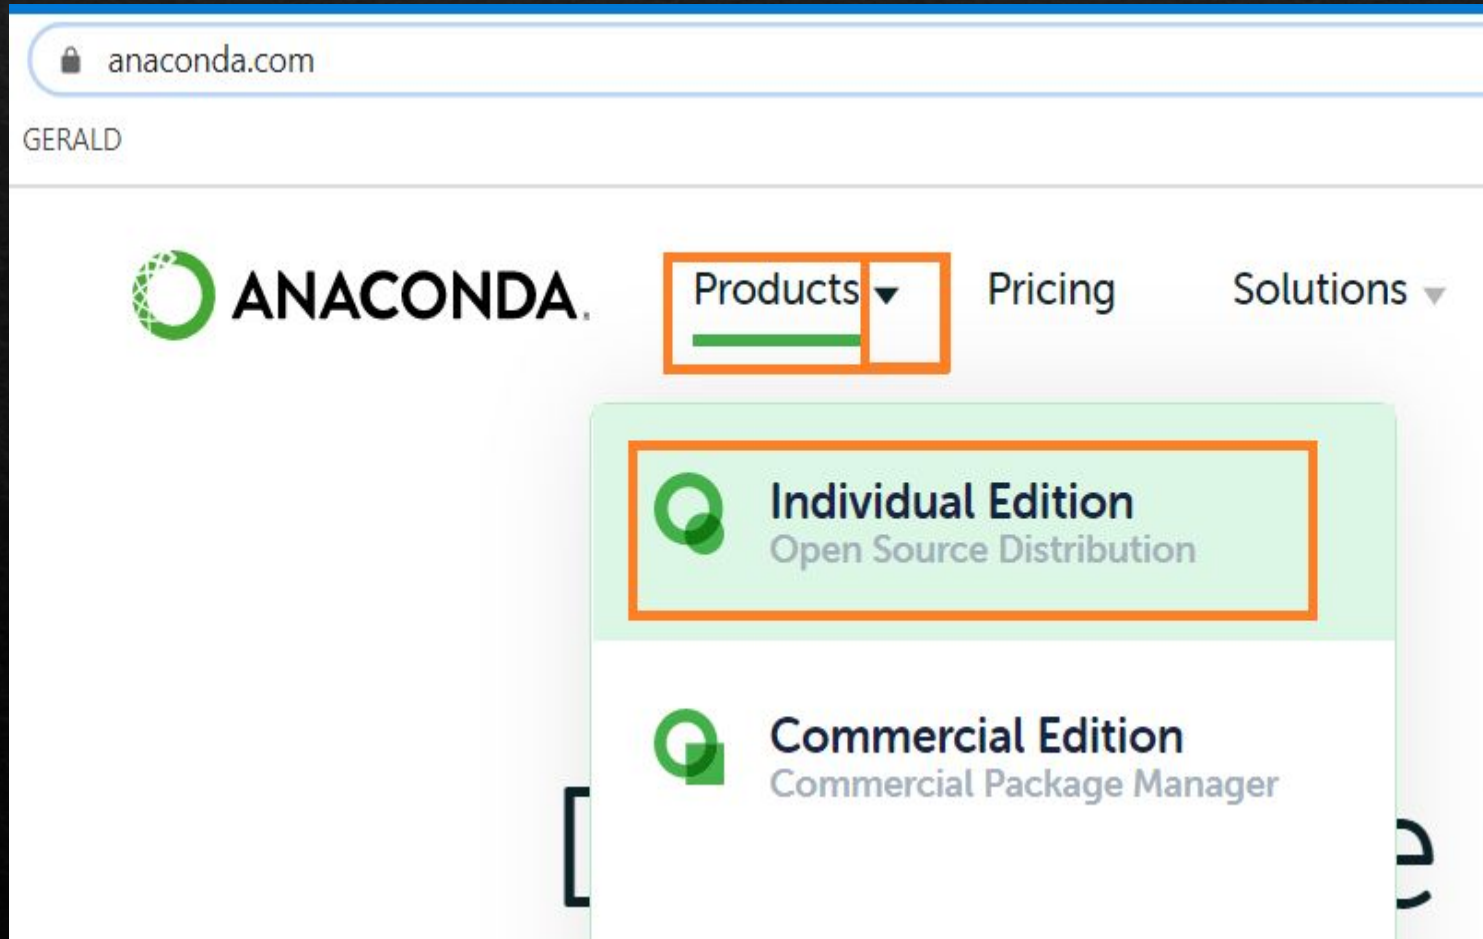

- ▢ Simple Linear Regression Algorithm
- ▢ Multiple Linear Regression Algorithm
- ▢ Polynomial Regression Algorithm
- ▢ KNN (K Nearest Neighbor) Algorithm
- ▢ Decision Tree Algorithm
- ▢ Random Forest Algorithm

## ◆ Classification

- ▢ Logistic Regression Algorithm
- ▢ KNN (K Nearest Neighbor) Algorithm
- ▢ Naïve Bayes Algorithm
- ▢ Decision Tree Algorithm
- ▢ Random Forest Algorithm
- ▢ SVM (Support Vector Machine) Algorithm

# Software

<https://www.anaconda.com/products/individual>

The image is a screenshot of the Anaconda website's product page. At the top, the browser's address bar shows the URL `anaconda.com/products/individual`, which is highlighted with an orange rectangular box. Below the address bar, the name "GERALD" is visible. The main content area features a horizontal row of five product cards, each with a logo, name, version, description, and an "Install" button. The products are: JupyterLab 1.2.6, Orange3 3.23.1, Qt Console 4.4.8, RStudio 1.1.458, and Spyder 4.3.1. To the right of this row, there is a large text block that reads: "Expedite your data science journey with materials, documentation, and community. Anaconda.org." Below this text, there is a large, rounded rectangular button with the text "Install Anaconda", which is enclosed in an orange rectangular box.

GERALD

lab  
JupyterLab  
1.2.6  
An extensible environment for interactive and reproducible computing, based on the Jupyter Notebook and Architecture.  
Install

Orange3  
3.23.1  
Component based data mining framework. Data visualization and data analysis for novice and expert. Interactive workflows with a large toolbox.  
Install

IPyQt  
Qt Console  
4.4.8  
PyQt GUI that supports inline figures, proper multiline editing with syntax highlighting, graphical calltips, and more.  
Install

R  
RStudio  
1.1.458  
A set of integrated tools designed to help you be more productive with R. Includes R essentials and notebooks.  
Install

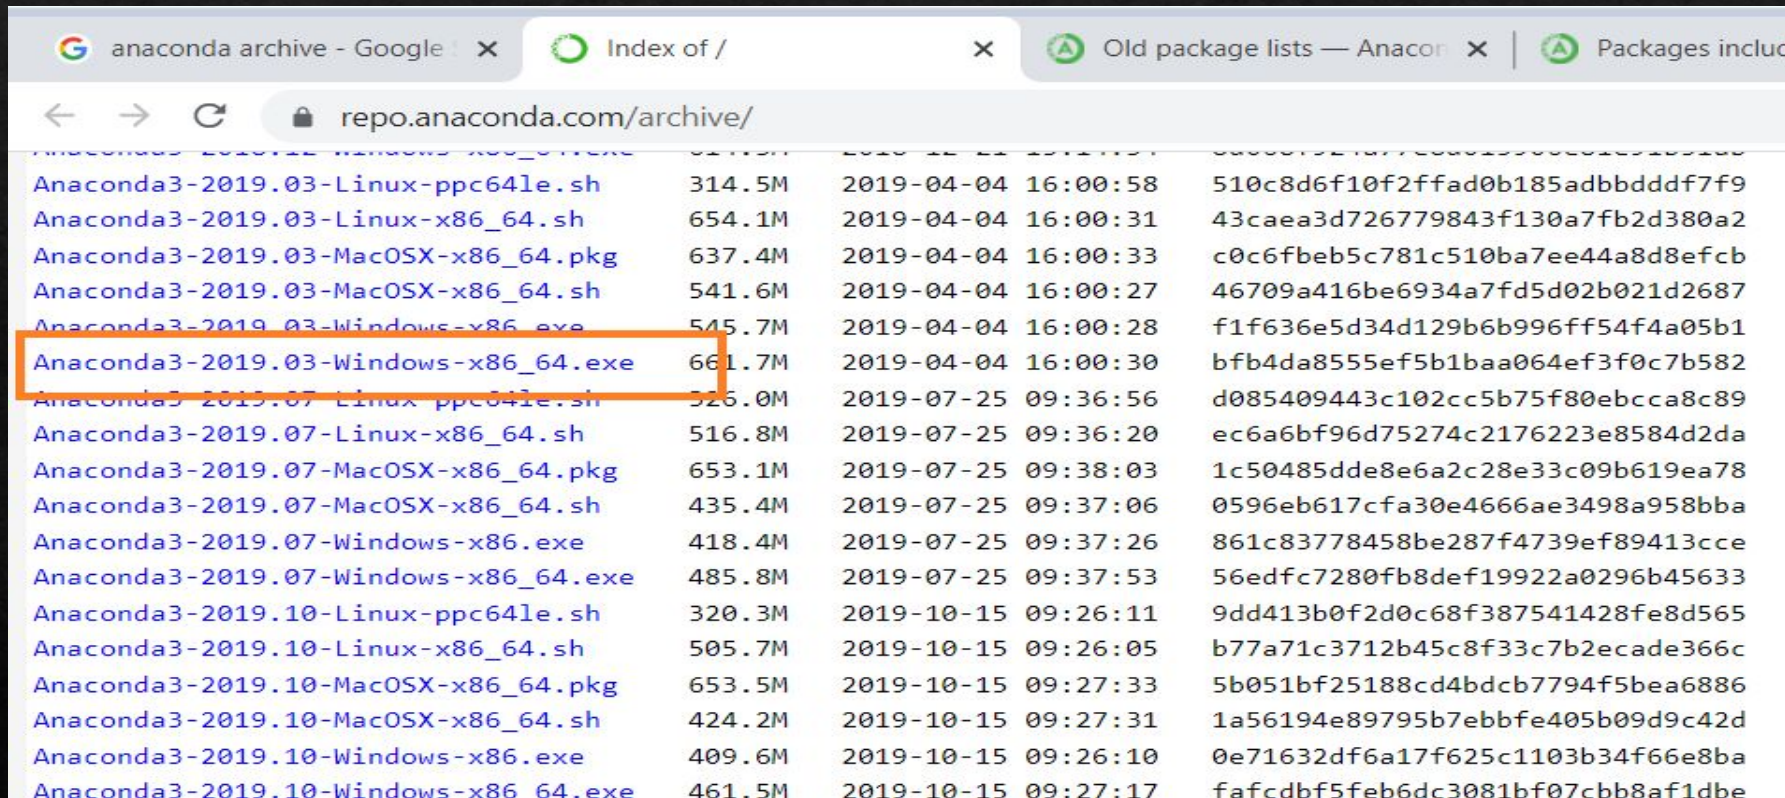

Spyder  
4.3.1  
Scientific Python Development Environment. Powerful Python IDE with advanced editing, interactive testing, debugging and introspection features.  
Install

Expedite your data science journey with materials, documentation, and community. Anaconda.org.

Install Anaconda

# Software –Previous Versions
